

Case Management: Positive Rapid Antigen Testing Results

All residents have access to rapid antigen test kits for asymptomatic COVID-19 testing.

Anyone who tests positive for COVID-19, whether through a PCR or rapid antigen test, should self-isolate immediately at home or in another suitable environment.

In all instances, you are required to abide by the proof of vaccination/negative testing policies for your workplace.

Positive Rapid Antigen Test Result

Regardless of vaccination status, it is recommended you self-isolate for five days from the date of test or 24 hours after fever has resolved without the aid of fever-reducing medications and all other symptoms have been improving for at least 48 hours, whichever is later.

Up to 10 days after testing positive, continue to reduce exposures to others by distancing, wearing a mask, practicing respiratory etiquette and hand hygiene and limiting contacts especially with people at high risk for severe disease (older, immune compromised, etc.) and settings with people at high risk such as visiting long term care.

**Call Healthline 811 or Community Health Centre if
COVID-19 symptoms develop or worsen.**
